**TX3 Power Supply Voltage Selection**

These instructions explain how to set the voltage on the Switching Power Supply for the TX3 Touch Screen to 230 Volts from 115 Volts.

1. Turn off the TX3 unit and disconnect all power from the TX3 unit and from the Switching Power Supply.

   ![](image)

   **Attention:** The power must be turned off before the Switching Power Supply is accessed. Failure to do so may result in damage to the equipment or electric shock that can lead to death.

2. Open the Switching Power Supply box using the key for the TX3 unit. The Switching Power Supply unit is secured inside the box by metal guides and two screws on either side of the terminal block. Unscrew and remove the screws on both sides of the terminal block.

---

**Figure 1   Inside the Switching Power Supply Box**
3. Lift the Switching Power Supply unit out of its box to access the red voltage selection switch.

4. Switch the voltage selection switch to the required voltage level. Place a slot screwdriver in between one of the holes in the chassis to access the switch. By default it is set to 115 Volts.

5. Place the Switching Power Supply back into the box using the metal guides to position it and then replace the screws on both sides of the terminal block to secure it into the box.

6. Reconnect the power and turn on the TX3 unit.

**Notes:**
