USB ENROLLMENT READERS - USA

Dear Valued Customer,
We're thrilled to announce the launch of the USB enrollment readers, the newest innovation in our product lineup. These readers serve as a convenient tool for installers, providing a simple and efficient way to capture card data and display it in clear text for easy registration.

These enrollment units are pre-configured with 26Bit Wiegand programming and will output the card ID as a decimal number via USB keyboard emulation, eliminating the need to enter the data manually.

Simply connect the reader to your PC—Windows™ will automatically detect the device and begin the installation. Once connected, open any word processing program and present a credential to the Enrollment Reader. The internal card ID will be displayed as a decimal number directly within the document.

TX3-P125
125 KHz USB Proximity Enrollment Reader that outputs card IDs using keyboard emulation, streamlining the enrollment process and eliminating the need for manual data entry.

TX3-Delta
13.5 MHz USB Contactless Smartcard Enrollment Reader that outputs card IDs using keyboard emulation, streamlining the enrollment process and eliminating the need for manual data entry.
